Learning Forensic Assessment 2015-10-05 this book uses the adventures of Sherlock Holmes as a starting point to discuss the growth of forensic science during the Victorian era. It explores the emergence of science from superstition, how forensic autopsies evolved from anatomical dissection, and the huge advances in blood chemistry and poison detection.

Computer Forensics JumpStart 2011-03-15 For over ten years he was first detective on the scene when a murder was committed in South London. In the confusion and horror of the crime scene he identified the forensic clues that would later be needed to convict the killer in the calm and measured atmosphere of the Old Bailey, calling out the necessary experts from pathologists to ballistics specialists, protecting the scene against contamination. One slip and a case would crumble. One moment of inspiration and the yard would have its man. He was the natural choice when the un were looking for an experienced detective to create a trail of evidence linking the mass graves of Bosnia to the people who ordered the worst war crimes seen in Europe since the Second World War. From the Flying Squad to investigating war crimes, tells of the rise of forensic evidence against the true story backdrop of a detective who has spent a career at the front line in the war against murder, the ultimate crime. It traces the development of forensic science and techniques from the days of the fingerprint to the battery of tests now available to homicide investigators. It is told in the no-nonsense style of a pioneer cop who has seen the worst that human beings can do to each other.

Beyond the Body Farm 2009-10-13 David Houston Jones builds a bridge between practices conventionally understood as forensic, such as crime scene investigation, and the broader field of activity which the forensic now designates, for example in performance and installation art, as well as photography. Contemporary work in these areas responds both to forensic evidence, including crime scene photography, and to some of the assumptions underpinning its consumption. It asks how we look and in whose name foregrounding and scrutinising the enduring presence of voyeurism in visual media and instituting new forms of ethical

engagement. Such work responds to the object-oriented culture associated with the forensic and offers a reassessment of the relationship of human voice and material evidence. It displays an enduring debt to the discursive model of testimony which has so far been insufficiently recognised and which forms the basis for a new ethical understanding of the forensic. Jones's analysis brings this methodology to bear upon a strand of contemporary visual activity that has the power to significantly redefine our understandings of the production, analysis and deployment of evidence. Artists examined include forensic architecture, Simon Norfolk, Melanie Pullen, Angela Strassheim, John Gerrard, Julian Charrière, Trevor Paglen, Laura Poitras, and Sophie Ristelhueber. The book will be of interest to scholars working in art history, visual culture, literary studies, modern languages, photography and critical theory.
